

PROJECT PROFILE: WOODLAND HILL SENIOR LIVING

Amcon Concrete Products and TCC Materials partnered with Lanz Masonry & Concrete to supply [AmStone Travertina Architectural Series](#) concrete masonry units along with the colored mortar for the newly constructed Woodland Hill Senior Living in Hudson, WI.

The design of the building required a unique aesthetic element on the concrete masonry portion. AmStone Travertina Series fit the design demand with its multi-dimensional burnished, recessed face texture that mimics the look of travertine stone, but with the economy of a CMU. The block was also selected for this project due to its resemblance to cut-stone.

In addition to the Travertina CMUs, Amcon Concrete Products also supplied the project with:

- [Architectural Precast Sills](#)
- [Concrete Block](#)
- [Colored Mortar](#)
- [Allan Block Segmental Retaining Wall Units](#)

Amcon sales representative, Tab Meyer, helped coordinate the job. “The job went really well. It was a large project so it took about 4-5 months to put all the product on. Overall, it was a success.”
