

PROJECT PROFILE: Runnings Store Expansion

For more than 75 years, Runnings has proudly served customers with a wide selection of trusted brands, quality merchandise and hometown friendly customer service.

Committed to improving experiences for customers, Runnings purchased grey concrete block from Amcon Concrete Products for the construction of the addition. This block was later painted for the final look seen at the Monticello store.

Why Paint Concrete Block?

There are many reasons why builders choose to install and paint block. Here are three common reasons:

- » Structural Integrity: The reliability and performance of concrete is well proven and its ability to be painted without any sacrifice to function makes it a great option.
- » Aesthetic: Standard blocks are usually offered in limited variety, applying layered paint to concrete block can add design appeal to any space.
- » Protection: Paint layers block dirt and build up over time which allows for easier cleaning.
