

# TENON<sup>®</sup>

Waterproofing & Crack Isolation Membrane  
& Masonry Veneer Mortar HB

## PROJECT SPOTLIGHT · TCC MATERIALS' VINTON OFFICE REMODEL

The TCC Materials location in Vinton, Iowa, got a taste of its own medicine during a remodel when repairs and upgrades were made to several areas in and around the facility.

On the interior, upgrades were made to expand the locker room and break room, and improvements were made to the restrooms. On the outside of the building, Novabrik Split Face brick in the Harvest Blend color was used to showcase products made by both TCC Materials and Amcon Concrete Products. The project also included the addition of a Novabrik wainscoting along the front of the building. Thin brick was applied over cement boards using TCC Materials' Tenon Waterproofing & Crack Isolation Membrane as well as Tenon Masonry Veneer Mortar HB. The Waterproofing & Crack Isolation Membrane was used as a waterproofing underlayment to protect the building from water damage and mold growth. Additionally, Masonry Veneer Mortar HB was applied to increase strength between the brick and the cement boards behind them.

TCC Materials Regional Manager Scott Ellingson said, "It was neat that we could use a wide variety of products made by our companies, and that our employees could see these products that they produce being installed. The office also can serve as a showcase for these products when our customers visit."

The project used 150 sq. ft. of Novabrik and 300 sq. ft. of thin brick. You can learn more about Novabrik and TCC Materials' Tenon line of products by visiting the website at [www.tccmaterials.com](http://www.tccmaterials.com).
